

Entry for DSA x DAPH: Data Analytics Series Training and Event

Thank you to Data Analytics Philippines and DataSense Analytics for this learning opportunity.

In this event, I got introduced to Power BI that led me to my first dashboard using MS Power BI. This dashboard highlights the metrics for the sales performance of the sample dataset/company - Adventure Works, including sales forecasting and analysis.

Insights

- From 2018 to 2020, Adventure Works almost managed to reach the 1 million dollar milestone with a profit margin of 1.29% and Sales Growth of 75%. In 2020, they sold 57,851 units of Accessories, Bikes, Clothing and Components.
- Their bikes are the most ordered product contributing to almost 26.5 million sales. They sold the most of this product during the 2nd Quarter of FY2020, specifically on Dec. 2019.
- The company performed best at FY2020 accompanied by a linear increase in sales.

Recommendations

- Visual to identify products, regions, and resellers are the most and least profitable
- More monitoring visuals for Sales decline and Customer retention
